

The Future of Food and Farming

Communication from the Commission

DG Agriculture and Rural Development
European Commission

Brigitte MISONNE
Deputy Head of Unit Animal Products

#FutureofCAP

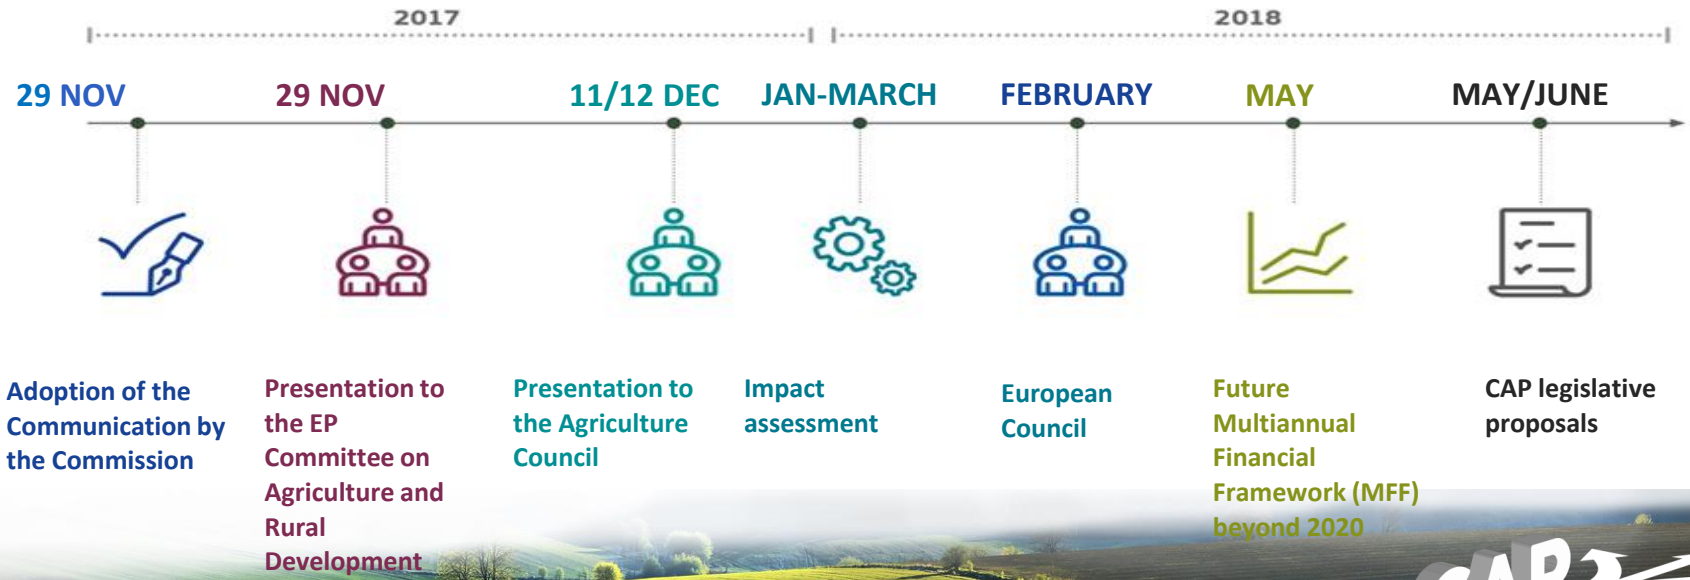

OUTLINE

- **Roadmap to the future CAP**
- **Future CAP objectives & delivery model**
- **Focus on some elements of the Communication on the Future of Food and Farming**
 - Environmental and climate action (water quality, carbon emissions, biodiversity, etc.)
 - Risk management
- **Current market safety net – SMP stocks**

ROADMAP

CAP

European
Commission

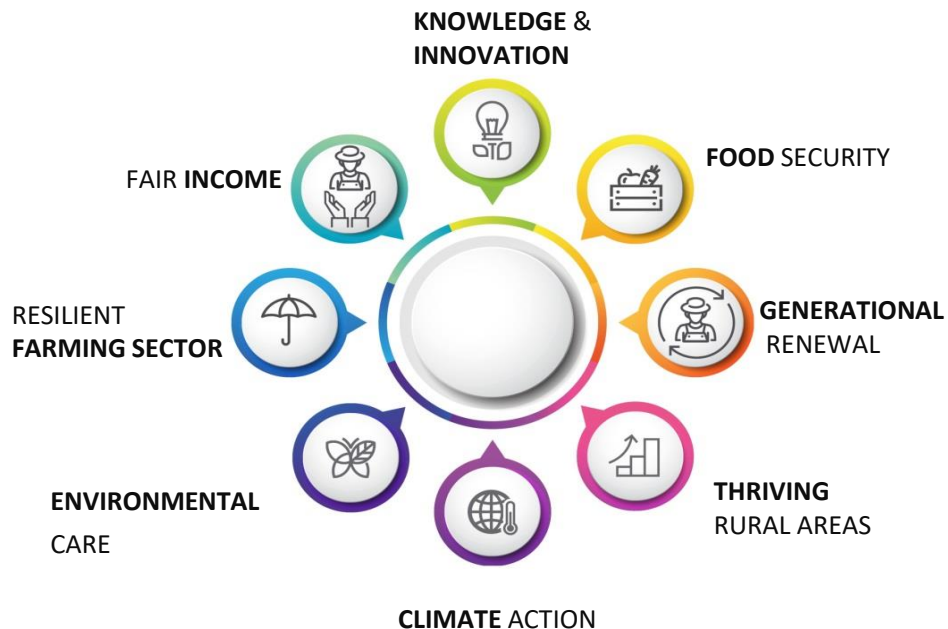

FUTURE CAP OBJECTIVES

Foster a smart and resilient agricultural sector

Bolster environmental care and climate action

Strengthen the socio-economic fabric of rural areas

Enhance knowledge-basis
More subsidiarity/performance
Enhance synergies with other policies

CAP

FUTURE CAP DELIVERY MODEL

EU LEVEL

Objectives of the CAP

Broad types of interventions

Basic requirements

MEMBER STATES

CAP Strategic Plan with **national targets**

Tailor CAP interventions to specific needs

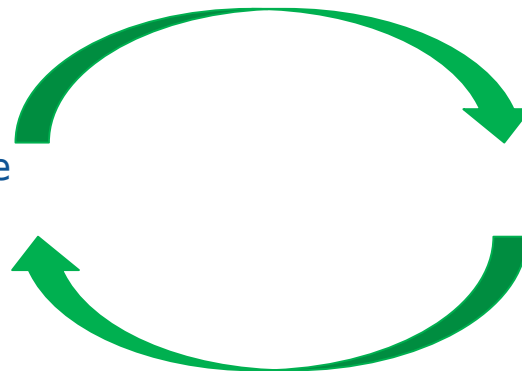

Compliance requirements

ENVIRONMENTAL AND CLIMATE ACTION

Farming is affected by climate change and environmental degradation

Farming can help to achieve EU environmental and climate objectives, COP21 goals and SDGs

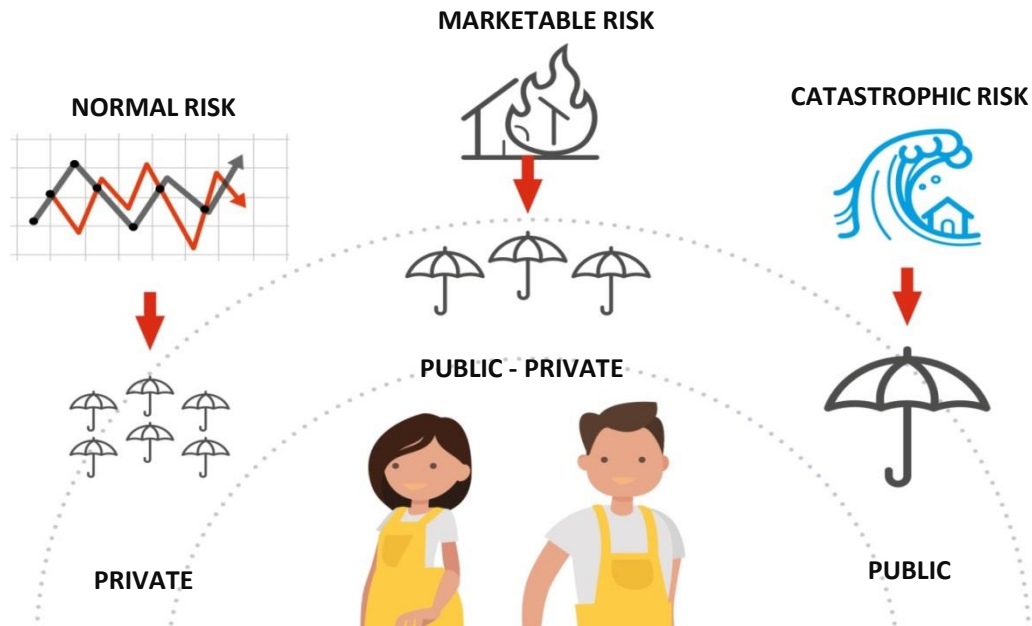

ENVIRONMENTAL AND CLIMATE ACTION

- Future **green architecture**
 - Environmental and climate **objectives** set at **EU** level
 - **Member States** set adequate **targets** in their **CAP strategic plans**
 - 1) **Mandatory**: all income support linked to environment and climate friendly farming practices = **conditionality**
 - 2) Voluntary **entry level schemes** going beyond conditionality
 - 3) Additional (voluntary) more ambitious agri-environment-climate measures (**AECMs**)
- Explore **nutrient management plan** for optimising farm income, protecting water quality and cutting greenhouse gas emissions from soil

DEVELOPING AN APPROPRIATE FRAMEWORK FOR **RISK MANAGEMENT**

RISK MANAGEMENT

Ideas for future CAP combining EU-level support with Member States' tools and private sector instruments

- **EU-level platform on risk management** (on DG AGRI website): single multi-stakeholder hub, generating and sharing knowledge, experience and best practices among actors, from farmers and public authorities (Commission = facilitator) to research institutes and private sector players
- Explore:
 - Use of **financial instruments** (loans, guarantees and equity to support investments in physical assets and preventive measures reducing risk exposure - e.g. flood prevention - to facilitate access to working capital)
 - Support for **re-insurance of mutual funds**
 - Incentives for **precautionary savings** (reserve in good years for cash flow in bad ones)
- Training, knowledge transfer and **farm advisory** services
- Explore actions by **Member States** (e.g. taxation)

Article 11

Products eligible for public intervention

Wheat	Beef/veal
Barley	Butter
Maize	Skimmed milk
Rice	powder (SMP)

Article 12

Public intervention periods

Buying-in at fixed price within ceiling for common wheat, butter, SMP
(beyond ceiling: by tender)

Tender for durum wheat, barley, maize, paddy rice, beef and veal

Aid for private storage

Article 17

Eligible products

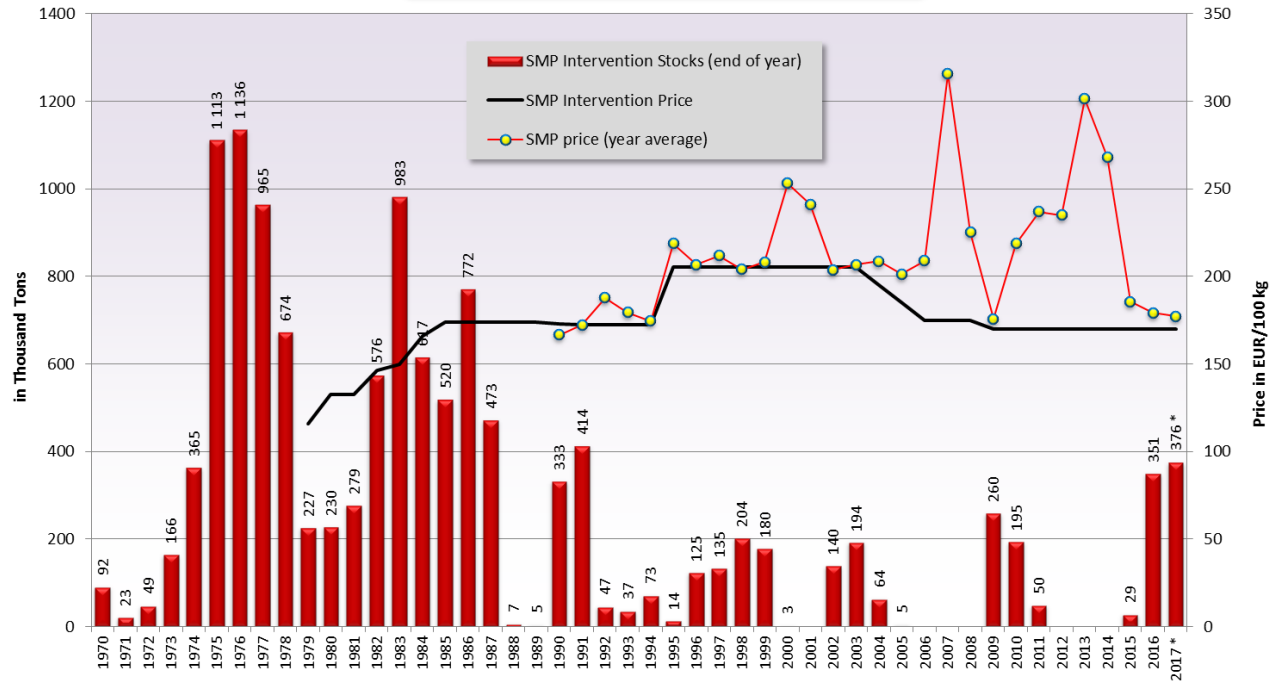

Sugar	Flax
Olive oil	Bovine meat
Cheese	Pigmeat
Butter, SMP	Sheep/goat meat

Official Journal
of the European Union

Opening tender procedure
or
fixing aid in advance

Intervention stocks and prices of SMP
